Research Symposium  
March 3, 2022

# Monitoring Biodiversity

Akhil Chavan  
Lalith Polepeddi  
Dr. Emily Weigel

# Research Problem

- Living Building serves the people, can its environment serve more?
- When targeting the imperatives set forth in the various Petals, can we also consider the native species that call this environment home?
  - Place Petal – urban agriculture
  - Equity Petal – universal access to nature and place
  - Health & Happiness Petal – biophilic environment
  - Beauty Petal – uplift the human spirit

*EcoCommons*

# Methodology

Videos from  
camera traps

# Methodology

# Methodology

*Script to read videos from google drive and store image files of each frame*

# Methodology

*Script to read videos from google drive and store image files of each frame*

*TensorFlow Object Detection – pretrained model to identify “animal objects” and simultaneously exclude humans*

*TensorFlow Image Classification and Microsoft Species Classification – pretrained models to classify species*

# Results

- Airtable
- Threshold for confidence at each step
- Comparison of two different ways of classifying
- Screenshot of Airtable to display results to others

# Conclusion

- Pipeline is developed to remove manual labor in the post-processing phase after collecting videos
  - Less concerned about humans in videos
  - Data ingestion and analysis foundation is set with this pipeline
  - Can be built out more over time
  - Replicable and scalable
- Pretrained models are powerful and not too hard to use!
  - Human validation is necessary, but models allow for less man hours and more manageable data
- Develop strong partnerships to make your effort more meaningful and your results more long term

# Future Research

- Compare different pre-trained models and test performance against human labeled dataset
- Develop model that is specifically trained on common species in the Southeast
- Separate out by different fauna: birds vs rodents
- Can develop similar pipeline for audio data to focus in on birds and insects
  - Dr. Weigel's team has microphone data as well
- Develop a mapping system that tracks animals as they move across campus
- All the findings can be shared with other cross-disciplinary research teams to mutually work towards tying back to the Petals
  - urban agriculture
  - biophilic environment
  - universal access to nature and place
